1 Abstract

The work is focused on Urology and diuretic tea combinations. At first the occurrence of Urinary tract's diseases are mapped in the case of individual age categories. And also in the case of both sex's biological differences. The text also includes phytotherapeutic view of the most using herbal drugs.

Individual tea combinations are divided into three categories. They are mass produced, unofficial and official tea combinations. There is also percentage representation of individual herbal drugs and pharmacopoeia and non pharmacopoeia drugs, comparison of urological tea combinations in the numbers of containing drugs. The result of the work is summarized in tables and graphs in the end.

The content of active substances is compared and also their effect on urological apparatus. In the end there is comparison of individual pharmacopoeial definitions and requirements
